First, before preparing the homework, I examined the problems experienced during the pandemic period. I've seen many problems we see in the media, but all of them have been talked about a lot. So I decided to examine a problem that no one else had seen.

The biggest problem that I saw around me during the pandemic period and that upset me was unemployment. Many families are going through difficult times as they are unemployed. Fathers who cannot afford diapers for their babies, mothers who have to cook less food in the pot, children who cannot attend their online classes because they do not have a computer, students who are looking for a job in their spare time to provide financial support to their families. All this made me very sad and I decided to do research on this subject. I researched the unemployment data of the last 2 years to summarize this situation in the world. I found I convert the chart with data visualization tools convert into tables. Then I made comments by examining the graphics. While commenting, I took into account the current economic problems and the extraordinary situation due to the pandemic. After the examinations, I realized that millions of workers were unemployed during the covid19 process. Curfews were imposed during the pandemic process in our country and thousands of workers working in the service sector were unemployed. Because when the bans were implemented, companies could not sell and made a loss.

To prevent unemployment, Companies need to pay attention to budget management and the government needs to support businesses. I hope that all unemployed people will have a job as soon as possible.
